

Gabriel Goldstein

Top Secret Clearance

ggoldstein771@gmail.com ❖ (805) 990-4541 ❖ [GitHub](#)

SUMMARY

Software engineer with 4 years across cleared systems test, data engineering, and full-stack development. Automated 92.6% of a previously manual STIG testing process at nLogic; earlier freelance ownership, data-engineering work on an Agile team that reduced General Motors' expenses by ~\$10M. Active Secret clearance with interim Top Secret.

SKILLS, TECHNOLOGIES & INTERESTS (USED FOR ATS KEYWORD MATCHING)

Languages: Python, SQL, JavaScript/TypeScript, PowerShell, Bash, Java

Web & Frameworks: React, Next.js, Node.js, Django, Spring Boot, HTML/CSS

Cloud & Infrastructure: Docker, Kubernetes, AWS, Azure, Linux, Git

Data: ETL, SSIS, PowerBI, MongoDB, PySpark, Oracle/MSSQL

Security & Test: STIG, RMF, Splunk, Selenium, CI/CD (GitHub Actions), Agile

WORK EXPERIENCE

L3Harris

Jun. 2026 – Present

Test and Integration Specialist

Colorado Springs, CO

- **Skills used: Hardware Testing, Systems Integration, Agile (Kanban), Technical Documentation**
- Established a Kanban board for the UEWB AGD program, giving the team shared visibility into task status and ownership and returning the project to schedule.
- Authored onboarding documentation covering the full UEWB AGD program, standardizing ramp-up for incoming team members and reducing reliance on undocumented tribal knowledge.
- Conducted hardware testing in support of system integration and verification activities.

nLogic

Nov. 2024 – Jun. 2026

Cyber Security Test Engineer (Secret Clearance)

Colorado Springs, CO

- **Skills used: SQL, HTML/CSS, JavaScript, Kubernetes, Excel, Microservices (Testing), PowerShell, Bash scripting, AI (Claude: agents, skills, redefining context)**
- Traced Program Office defined requirements (DOD, RMF, and program specific) for 6 programs and determined testability on a worldwide as well as laboratory level for 1000s of functional and cyber-rated requirements.
- Ran and created Detailed Test Procedures based on Program Office requirements to test a variety of Secret Sustainment SATCOM systems, informing fielding decisions.
- Currently automated 92.6% of the entire testing process including STIG (e.g., Windows 10/11, RHEL7/8/9, ASD) vulnerability testing using PowerShell, from a previous 40% total automation.
- Utilized and tested implementations of a wide array of tools - Splunk + Cribl, Docker, Docker Scout, Ansible, MicroK8s, Zeek, and Suricata.
- Created a PowerShell script that processes CKL files into an HTML report to be read more easily (and later be able to perform desired data analytics functions).

General Motors

Jun. 2022 – Nov. 2023

Software Engineer

Chandler, AZ

- **Skills used: Python, AI, CI/CD (GitHub Actions), Back-end, SQL, Azure, ETL, SSIS, Machine Learning (PySpark)**
- Served as part of an Agile data-engineering team (Global Production and Supply Chain planning) that reduced General Motors' expenses by ~10 million dollars.
- Delivered 20+ PowerBI reports, streamlined several billion row ETL from data lake into data warehouse and further onto several databases (Oracle, MSSQL), and automated report QA testing through Python and Azure DevOps; commenced CI/CD implementation, cutting overall (combined effort) project delivery time by 30%.
- Analyzed and optimized the ticket creation process by gathering feedback from both Business and IT teams, leading to a 25% boost in average ticket resolution rate.

Freelance

Dec. 2020 – Jun. 2022 / Dec. 2023 – Oct. 2024

Front-End Engineer

Los Angeles, CA

- **Skills used: Front-end (HTML/CSS, JavaScript, Figma), Frameworks and Libraries (React, Vue, Next.js, Three.js), Full Stack (Spring, Go, Django, SQL, NoSQL (MongoDB, GraphQL)), CI/CD (GitHub Actions),**

Cloud (AWS, Google Cloud), Microservices (Development)

- Owned a freelance development business, negotiating with and marketing labor to over 15 clients in 2023–2024.
- Developed and maintained 8+ websites (ecommerce, landing pages, applications) by leveraging technologies such as, but not limited to, Elementor, HTML, CSS, JavaScript, ReactJS, VueJS, Spring Boot, and MongoDB; enhanced user experience and increased site traffic by a 40% average within 6 months.

PROJECTS

Discord Clone

- Engineered a comprehensive full-stack, real-time Discord clone with servers, channels, video/audio calls, and message management; leveraged NextJS, Prisma ORM, SQL, Tailwind CSS, and ReactJS.

Machine Learning Stock Trading Bot

- Created a sophisticated trading strategy in Python with FinBERT sentiment analysis and Alpaca API; organized buy/sell decisions and risk management through bracket orders, resulting in a 500% performance boost over selected paper stock's growth rate.

Ceiling Sam Website

- Freelance work for Digital Growth Marketing (Chris Sivertson)
- Created an ecommerce site starting with Shopify as a back-end template then expanding to meet Chris Sivertson's vision by developing entire custom Shopify themes using HTML, CSS, JavaScript. Increased client's sales by ~50%.

24/7 AI Livestream

- Freelance work for J.G. Creative Services (Julian Guenther)
- Created a **24/7 high availability** livestream incorporating **microservice architecture**.
- Application was split into **front-end client, Discord bot, Unity, back-end (ChatGPT), AI voice, and MongoDB services** through **Docker and Kubernetes**.
- Discord messages would be parsed by a Discord bot then processed by ChatGPT to be made into prompts which were then processed by an AI voice API. Topic name, script, and voice were then put into MongoDB and processed in a Unity Engine scene in real-time. Implemented automatic topic generation whenever no prompt was being generated.
- This contributed to a **~300% increase** in a cryptocurrency's value and the final implementation allowed bottlenecks (AI voice generation) to be resolved, resulting in a **~4x increase in topic throughput** by **horizontally scaling voice generation workers** and eliminating **full-pipeline downtime during service failures**.

EDUCATION / CERTIFICATIONS

California Lutheran University
B.S., Computer Science

Jun. 2018 – May 2022
Thousand Oaks, CA

CompTIA Security+

Mar. 2025 – Mar. 2028
